JBrowser

JBrowser is a powerful and accessible genome browser to interactively visualize genetic information and transcriptome data.

On this page, available tracks categorized by type are provided on the left, including reference sequences and RNA-seq datasets of lemma, lodicule and leaf. To get started, users select the tracks of interest from the 'Available Tracks' panel. Once the tracks are chosen, users can zoom in and out as well as drag left or right to see more details. What's more, local track files can be uploaded through the 'Track' module.
